## What is claimed is:

- A compound 8 to 50 nucleobases in length targeted to a nucleic acid molecule encoding CREB, wherein said compound specifically hybridizes with said nucleic acid molecule encoding CREB and inhibits the expression of CREB.
- The compound of claim 1 which is an antisense oligonucleotide.
- The compound of claim 2 wherein the antisense oligonucleotide has a sequence comprising SEQ ID NO: 10, 11, 12, 13, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 33, 34, 35, 36, 37.
- The compound of claim 2 wherein the antisense oligonucleotide internucleoside linkage. least one modified
- The compound of claim 4 wherein the modified internucleoside linkage is a phosphorothioate linkage.
- The compound of claim 2 wherein the antisense oligonucleotide comprises at least one modified sugar moiety.
- The compound of claim 6 wherein the modified sugar moiety is a 2'-O-methoxyethyl sugar moiety.
- The compound of claim 2 wherein the antisense oligonucleotide comprises at least one modified nucleobase.
- The compound of claim 8 wherein the modified nucleobase is a 5-methylcytosine.
- The compound of claim 2 wherein the antisense oligonucleotide is a chimeric oligonucleotide.
- 11. A compound 8 to 50 nucleobases in length which specifically hybridizes with at least an 8-nucleobase portion of an active site on a nucleic acid molecule encoding CREB.
- A composition comprising the compound of claim 1and a pharmaceutically acceptable carrier or diluent.
- The composition of claim 12 further comprising a colloidal dispersion system.
- The composition of claim 12 wherein the compound is an antisense oligonucleotide.

- 15. A method of inhibiting the expression of CREB in cells or tissues comprising contacting said cells or tissues with the compound of claim 1 so that expression of CREB is
- 16. A method of treating an animal having a disease or inhibited. condition associated with CREB comprising administering to said animal a therapeutically or prophylactically effective amount of the compound of claim 1 so that expression of CREB
  - The method of claim 16 wherein the disease or is inhibited. condition is a hyperproliferative disorder. wherein the 17
  - method 18. The hyperproliferative disease is cancer.
  - 19. The method of claim 16 wherein the disease or condition arises from aberrant apoptosis.
  - 20. The compound of claim 1 targeted to a nucleic acid molecule encoding CREB, wherein said compound specifically inhibits the expression hybridizes with and alternatively spliced variant of CREB.
